Synthesis and In-Vitro Antibacterial Activity of 2-Acetyl-4-Chloro-5-Methylphenyl 2,3,4,5-Tetrafluorobenzoate Derivatives

Keywords: Anti-bacterial activity; Conventional Method; Gentamycin; 2,3,4,5-tetrafluorobenzoic acid; 1-(5-chloro-2-hydroxy-4-methylphenyl) ethanone

ABSTRACT

Chromones derivatives and pyrazole derivatives were synthesized and screened for antibacterial activity. Some chromones and Pyrazole derivatives like 6-chloro-7-methyl-2-(2,3,4,5-tetrafluorophenyl)-4H-chromen-4-one, 4-chloro-5-methyl-2-[5-(2,3,4,5-tetrafluorophenyl)-1H-pyrazol-3-yl]phenol were synthesized by a sequence of reactions starting from 2-Acetyl-4-Chloro-5-Methylphenyl 2,3,4,5-Tetrafluorobenzoate and were mentioned in scheme 1. Antibacterial activities of Chromones derivatives, Pyrazole derivatives were tested by the disc diffusion method by using Mueller Hinton Agar (M173) medium against various microorganisms such as Gram-positive Staphylococcus aureus, Gram-negative Escherichia coli, and Pseudomonas aeruginosa. Gentamycin at 100μg/ml were used as standard drugs for antibacterial activities. Characterization of compounds was performed by FTIR, 1H NMR and Mass spectrum. The compounds bearing nitro and oxygen groups have shown prominent activity when compared to compounds without these groups.
INTRODUCTION

Heterocyclic compounds containing N and O are found to display variety of biological activities; antimicrobial activity\(^1\). Chromones, pyrazole and its derivatives are important heterocyclic in organic, biochemistry and have been found in many chromones containing natural products such as Khellin, sodium cromoglycate, diosmin, flavones, and flavonoids etc. Chromones and pyrazole derivatives play an important role in medical field with many pharmacological activities such as antimicrobial, antiviral, antidiabetic and anticancer activity\(^2\)-\(^3\). Therefore substituted Chromones and pyrazole have attracted the interest of various research groups, especially since it has been reported that the influence of the substitution at 2 and 5-positions is very important for their pharmacological effect \(^5\)-\(^6\). Chromones and pyrazole are belongs to heterocyclic compound, which has a wide range of biological and pharmacological properties such as antimicrobial activity (antifungal, antibacterial), antitumor, anti-inflammatory, anti-HIV, antihypertensive, hydantoin exhibits diverse biological activities, such as anticonvulsant, antifungal activities, antithyroidal, antiviral, antitubercular, antiarrhythmic and anticonvulsant \(^7\)-\(^12\). Chromones and pyrazole nucleus were chosen because certain 2- amino Chromones and pyrazole were found to possess some anti-viral activity. It reveals that chromones and pyrazole possess broad spectrum activity such as antimicrobial\(^3\)-\(^6\), anti-inflammatory\(^7\), analgesic\(^8\), antitumorial\(^9\), antihypertensives\(^10\), anticonvulsant and antiviral\(^11\). There are antifungal and antibacterial agent having different structure and used in the treatment of fungal and bacterial infection. They are known to give variety of biological activities such as analgesic, anti-inflammatory, protein kinase C inhibitor\(^11\). Many Pyrazole derivatives possess activity like Antiepileptic and Antimicrobial\(^12\) Antiamoebic\(^13\) and Antiandrogenic activities\(^14\). Particularly, compound having both electron withdrawing groups such chloro and fluoro attached with Chromones ring and Pyrazole showed more inhibitory potential against fungal strains and bacterial strains than standard drug\(^15\).

MATERIALS AND METHODS

1-(5-chloro-2-hydroxy-4-methylphenyl) ethanone; 2,3,4,5-tetrafluorobenzoic acid; Pyridine, Hydrazine Hydrate; Guanidine Hydrochloride; Ethanol; Con. Hydrochloric acid; and Phosphorus oxychloride i.e. POCl\(_3\) were used for the synthesis of Chromones and Pyrazole. All chemicals were of analytical grade. All chemicals were of purchased from Modern Chemicals, Nashik and...
Atmaja Chemicals, Aurangabad. Conventional method was used for preparing 2-Acetyl-4-Chloro-5-Methylphenyl 2,3,4,5-Tetrafluorobenzoate derivatives.

**Experimental Section:**

All Chromones and Pyrazole derivatives were synthesized by conventional method. Melting points were determined by open tube capillary method. The purity of the compounds was checked on thin layer chromatography (TLC) plates (silica gel G) in chloroform: acetone (6:4) and chloroform: methanol (8:2) solvent systems, the spots were located under iodine vapors and UV light. IR spectra were obtained on a Perkin Elmer Spectrum1 FT-IR instrument (KBr pellets). Perkin Elmer Spectrum1 FT-IR instrument consists of globar and mercury vapor lamp as sources. ¹H-NMR spectra were recorded on a Bruker AVANCE III 500 MHz (AV 500) spectrometer using TMS as an internal standard in DMSO-d₆/CDCl₃ and mass spectra was obtained on JEOL GCMATE II GC-MS are presented as m/z. The synthetic route for the title compounds is shown in Scheme 1.

**Synthesis of 2-acetyl-4-chloro-5-methylphenyl 2,3,4,5-tetrafluorobenzoate (CF):**

A mixture of 1-(5-chloro-2-hydroxy-4-methylphenyl) ethanone (0.5g) and 2,3,4,5-tetrafluorobenzoic acid (0.5g) react with each other in the presence of POCl₃ (5 ml) and Pyridine (15 ml) and then stir on magnetic stirrer for 24 hrs, and then it gives solid product after addition of ice cold water and it gives 2-acetyl-4-chloro-5-methylphenyl 2,3,4,5-tetrafluorobenzoate (CF).

**Synthesis of 1-(5-chloro-2-hydroxy-4-methylphenyl)-3-(2,3,4,5-tetrafluorophenyl)propane-1,3-dione (CG):**

A solution of 2-acetyl-4-chloro-5-methylphenyl 2,3,4,5-tetrafluorobenzoate (CF) reacts with potassium hydroxide (0.5g) and pyridine (5 ml) and reflux for 3 h and then completion of the reaction was confirmed by TLC. The mixture was cooled by addition of ice. The precipitate formed was washed with water and recrystallized from ethanol and then it 1-(5-chloro-2-hydroxy-4-methylphenyl)-3-(2,3,4,5-tetrafluorophenyl)propane-1,3-dione (CG).
Synthesis of 6-chloro-7-methyl-2-(2,3,4,5-tetrafluorophenyl)-4H-chromen-4-one (CH):
(Scheme 1)

A solution of 1-(5-chloro-2-hydroxy-4-methylphenyl)-3-(2,3,4,5-tetrafluorophenyl)propane-1,3-dione (CG) reacts with con. Hydrochloric acid (5ml) and ethanol (5ml), and reflux for 2 h and then completion of the reaction were confirmed by TLC. The mixture was cooled by addition of ice. The precipitate formed was washed with water and recrystallized from ethanol and then it gives 6-chloro-7-methyl-2-(2,3,4,5-tetrafluorophenyl)-4H-chromen-4-one (CH).

Synthesis of 4-chloro-5-methyl-2-[5-(2,3,4,5-tetrafluorophenyl)-1H-pyrazol-3-yl]phenol (CI):
(Scheme 1)

A solution of 6-chloro-7-methyl-2-(2,3,4,5-tetrafluorophenyl)-4H-chromen-4-one (CH) reacts with hydrazine hydrate (5ml) and ethanol (10ml) and reflux for 3 h and then completion of the reaction were confirmed by TLC. The mixture was cooled by addition of ice. The precipitate formed was washed with water and recrystallized from ethanol and then it gives 4-chloro-5-methyl-2-[5-(2,3,4,5-tetrafluorophenyl)-1H-pyrazol-3-yl]phenol (CI)

Synthesis of 4-chloro-2-[2-imino-6-(2,3,4,5-tetrafluorophenyl)-1,2-dihydropyrimidin-4-yl]-5-methylphenol (CJ):
(Scheme 1)

A solution of 6-chloro-7-methyl-2-(2,3,4,5-tetrafluorophenyl)-4H-chromen-4-one (CH) reacts with guanidine hydrochloride (5 ml) and it was reflux for 3 hrs and then completion of the reaction was confirmed by TLC. The mixture was cooled by addition of ice. The precipitate formed was washed with water and recrystallized from ethanol and then it gives 4-chloro-2-[2-imino-6-(2,3,4,5-tetrafluorophenyl)-1,2-dihydropyrimidin-4-yl]-5-methylphenol (CJ).

**RESULTS AND DISCUSSION**

The syntheses of compounds CF to CJ were undertaken as per the scheme 1. The required 2-acetyl-4-chloro-5-methylphenyl 2,3,4,5-tetrafluorobenzoate (CF) was prepared by mixture 1-(5-chloro-2-hydroxy-4-methylphenyl) ethanone (0.5g) and 2,3,4,5-tetrafluorobenzoic acid (0.5g) react with each other in the presence of POCl₃ (5ml) and Pyridine (15ml) and then stir on magnetic stirrer for 24 hrs, and then it gives solid product after addition of ice cold water and it gives 2-acetyl-4-chloro-5-methylphenyl 2,3,4,5-tetrafluorobenzoate (CF). IR spectra were obtained on a Perkin Elmer Spectrum1 FT-IR instrument (KBr pellets). Perkin Elmer Spectrum1 FT-IR instrument consists of globar and mercury vapor lamp as sources. ¹H-NMR spectra were recorded on a Bruker AVANCE III 500 MHz (AV 500) spectrometer using TMS as an internal standard in DMSO-d₆/CDCl₃ and mass spectra was obtained on JEOL GCMATE II GC-MS are presented as m/z.
The results revealed that most of the synthesized compounds showed varying degrees of inhibition against the tested microorganisms. In general, the inhibitory activity against the tested gram-positive bacteria was higher than that of the gram-negative bacteria. The results indicated that the nitrogen and oxygen heterocyclic containing compounds having more antimicrobial activity. Moreover, the compounds CH, CI and CJ having the side chain showed higher activity than CF and CG, against *E. coli, S. aureus, Pseudomonas aeruginosa*. The replacement of oxygen to nitrogen resulted in increased antimicrobial activity. Our study revealed that all the compounds had stronger antibacterial activity against Gram-positive bacteria when compared to Gram-negative bacteria. Antimicrobial activity revealed that newly synthesized compound CH, CI and CJ showed good significant activity. The results of the preliminary antimicrobial testing of the prepared compounds, the typical broad-spectrum antibacterial drug like Gentamycin was shown in Table 2 and Fig.16.

**CONCLUSION**

Various 2-acetyl-4-chloro-5-methylenphenyl 2,3,4,5-tetrafluorobenzoate (CF) was synthesized from a mixture of 1-(5-chloro-2-hydroxy-4-methylenphenyl) ethanone (0.5g) and 2,3,4,5-tetrafluorobenzoic acid (0.5g). The structure antibacterial activity relationship of the synthesized compounds was based on the structure of final derivatives. These derivatives possess good antibacterial activity. The antimicrobial activities including antibacterial properties of the

*Citation: Rohit Jaysing Bhor et al. Ijppr.Human, 2016; Vol. 6 (2): 29-44.*
synthesized derivatives showed a significant activity as compared with standard drugs like Gentamycin.

ACKNOWLEDGMENT

The authors are thankful to Dr. V.D.Wagh, College of Pharmacy, Chincholi, Mr. Vikas Kunde and BAC-Test Laboratory in Nashik for providing necessary facilities and to carry out this work and in-vitro antibacterial activity.
