SYNTHESIS AND SPECTRAL CHARACTERIZATION OF (2E)-1-{4-[2-(4-chlorophenyl)-4-substitutedimino-1,3,5-dithiazino-6-yl]aminophenyl}-3-(3,4-dimet-hoxyphenyl)prop-2-en-1-one

Keywords: (2E)-1{4-[2-(4-chlorophenyl)-4-substitutedimino-1,3,5-dithiazino-6-yl]aminophenyl}-3-(3,4-dimet-hoxyphenyl)prop-2-en-1-one, Synthesis, spectral characterization, isocyanodichlorides

ABSTRACT
Recently, in a laboratory novel series of (2E)-1{4-[2-(4-chlorophenyl)-4-substitutedimino-1,3,5-dithiazino-6-yl]aminophenyl}-3-(3,4-dimet-hoxyphenyl)prop-2-en-1-one (IIIa-e) had been synthesized in this laboratory by refluxing (2E)-1-{4-[5-(4-chlorophenyl)-2,4-dithiobiureto]phenyl}-3-(3,4-dimethoxy phenyl)prop-2-en-1-one (I) with substituted isocyanodichlorides (IIa-e) in acetone medium in 1:1 molar proportion for 2 hours. The structures of all the synthesized compounds were justified on the basis of chemical characteristics, elemental analysis and spectral studies.
INTRODUCTION

Heterocycles containing compounds are more interesting due to their usefulness in the synthetic. Activity of each heterocycle depends on the structural arrangement. Every heterocycle have its unique application. Supplementary and particularly the heterocycles bringing nitrogen and sulphur in the same ring are known for tremendous biological and industrial applications. 1,3,5-dithiazine is one of the six member heterocycles contains two sulphur atoms and one nitrogen atom and acts as a potent drug in medicinal, agricultural and industrial fields.

Variety of 1,3,5-dithazines has been reported in the encyclopedia as the synthetic drug for different diseases. Every 1,3,5-dithiazino moiety has different applications according to the substituent attached to the basic nucleus of the 1,3,5-dithiazine. It has been also observed during literature study that 1,3,5-dithiazino nucleus and its derivatives possess effective properties. Some 1,3,5-dithazines reported different derivatives of 1,3,5-dithiazino moieties as in lubricating oil.

Considering the references, it was thought to synthesize some derivatives of 1,3,5-dithiazine in laboratory by one step cyclisation of \((2E)-1\{4-\{5-(4\text{-chlorophenyl})-2,4\text{-dithiobiureto}\text{phenyl}\}\text{-3-(3,4-dimethoxyphenyl)prop-2-en-1-one}\) (I) with N-substituted isocyanodichlorides \((\text{IIa-e})\) in acetone medium to isolate \((2E)-1\{4\text{-}\{2\text{-}(2\text{-methylpropan-2-y})\text{4-substitutedimino-1,3,5-dithiazino-6-yl}\text{amino phenyl}\}\text{-3-(3,4-dimethoxyphenyl)prop-2-en-1-one}\) (\text{IIIa-e}).

MATERIALS AND METHODS

Materials

All the chemicals used in this method are MERCKS (Manufactured in India). Compounds (I) are synthesized using reference method\(^{5-6}\).

Method

Method used in the present research is conventional refluxing on water bath at stable temperature.
EXPERIMENTAL

General Procedure

The interaction of \( (2E)\)-1-{4-[5-(2-methylprop-2-yl)-2,4-dithiobiureto] phenyl-3-(3,4-
dimethoxyphenyl)prop-2-en-1-one (I) with alkyl/aryl isocyanodichloride (IIa-e) in 1:1 molar ratio refluxed on water bath in acetone medium for 2 hours. During heating evolution of hydrochloride gas was clearly noticed. Product obtained was basified with dilute ammonium hydroxide and recrystallised from ethanol.

Similar, procedure was adopted for the synthesis of all the derivatives in the series.

The probable reaction for the formation of products is depicted below,

\[

CONCLUSION

The reaction data obtained supports the synthesis of series (IIIa-e). Spectral data also confirms the synthesized compounds (IIIa-e). A variety of such chalcone analogs of 1,3,5-dithiazines can be synthesized using the same method. This method is cheaper, convenient and less time consumable.
