ABSTRACT

Today's standard technological advances are only capable of performing laser medical surgeries at the strength of Mili Amperes which is: 1A= 1,000 Mili Amperes. Using the power of only 6-10 volts of electricity this equates to electric shock or most probably lethal shock. So it is too dangerous to heal unhealthy organs. The K-BTE device also has the ability of maintaining the bone and muscle tissue of astronauts in space. Currently, Astronauts' orbits are limited to six (6) months since they suffer from deterioration of bone tissue and show significant muscle atrophy. With that said, there are no circumstances – such as gravitation, vacuum, or any type of energetic field irradiation – that would have any detrimental influence on K-BTE's own energetic field. This would allow for the maintenance of Astronauts' bone and muscle tissue while in space thus preventing any decline or deterioration. This enriched-electrons-radiation-emitting-process is absolutely non-radioactive, non-toxic and is, in no way, “shock therapy”.

Today's standard technological advances are only capable of performing laser medical surgeries at the strength of Mili Amperes which is: 1A= 1,000 Mili Amperes.

Using the power of only 6-10 volts of electricity this equates to electric shock or most probably lethal shock. So it is too dangerous to heal unhealthy organs.

The Kostovic Bio-Technology Energetic Device has the ability to extract bio- electron's photons from H₂O electric fluid. Creating 1A= 1,000,000 Micro Amperes and 1A = 1,000,000,000 Nano Amperes.

Using the power of 120 Voltages or 240 Voltages or more, but creating Microamperes or even Nano Amperes we do not create any electric shock, nor is it at all lethal. Instead, Nick Kostovic discovered the technology to produce photons of electrons at this Micro and Nanoamperes level that is gentle yet precise and efficient in burning off the dead cells and energizing the hibernating healthy cells in the central nervous vascular system and the organs that he is working on.

Capable of performing all types of laser medical surgeries on the brain, heart, breast cancer or other cancers in any other physical organ with no harm to the healthy cells and no side effects. He has been performing treatments for last 15 years with more than 40,000 hours using the gentle strength of Micro Amperes and Nano Amperes.

-Micro Amperes maximum strength output between the first energetic field and the second energetic field on the floor of K-BTE(see diagram)are using 2 D/C Micro Amperes to 15 D/C Micro Amperes, with an average of 8.5 Direct Current, D/C Micro Amperes.

-This measured current is confirmed for the body's resistance from 1,000 /wet/ Ohms to 100,000 /dry/ Ohms or more, it doesn't even matter wet or dry it is not risk and it is absolute safe. The penetration of the bio electron's photons on the surface of the skin is soft. The severity of a lethal shock is absolutely eliminated as these Voltages cannot produce any dangerous shock to the body.

Only our method of combining high Voltages with low Micro Amperes and Nano Amperes has the capability to destroy and kill all Cancer Viruses, Hepatitis Viruses, Heart Disease, brain tumors, ALS, Parkinson's, Dementia, Alzheimer's disease, plus bacteria and microbes which leads to numerous other diseases that thrive in the decaying tissue and oxidized proteins. These

prematurely aging organs are starved of their blood supply due to the plaque in the vascular system preventing nourishment & oxygen in the blood supply from reaching and feeding the basic cells in the organ's fiber tissue resulting in decay and the premature aging of the organs.

I have no doubt that our technology of using bioelectric electron's photons enriched with certain natural acids it will also destroy and kill Ebola Viruses and prevent Epidemics obviously, I just haven't had the opportunity to try it yet.

This is brief description of the K-BTE medical laser device, which was developed and utilized this new advanced technology!

Definition of K-BTE Medical Laser Device

The K-BTE device releases electrons, enriched with natural acids, and is capable of “melting by burning off,” then dispersing, any number of benign or malignant tumors with metastasis in the brain or any other physical organ – with no harm to healthy cells.

It “Melts by burning off” then disperses many different types of damaged, diseased or necrotic cells in the brain – stopping or reversing any number of neurological disorders, with no harm to the healthy cells.

It “Melts by burning off” then disperses dead cells from the fiber of atrophied muscle, bone and cartilage tissue – as well as plaque from the vascular system – with no harm to healthy cells.

The K-BTE device attracts and transfers light – which consists of elemental biochemical charges and electron neutrinos – into the brain. This fosters the regeneration, recovery and re-growth of neurons in the brain, thereby regaining its ability to send impulses throughout the body while improving mobility.

THE K-BTE DEVICE IS INTENDED TO BE USED IN:

-Melting and destroying malignant cancer cells in the brain – or any other physical organ – accomplished with no side effects and no harm to healthy cells.

-Melting cleanses internal plaque from the vascular system in the brain or any other physical organ. This will prevent strokes, heart attacks, diabetes and many different neurological disorders.

-Melting cleanses the fiber of dead cells – dispersing them and making space for the formation of new and healthy cells. This is the most important step for a vital, longer lasting life. It can also be used for cosmetic and aesthetic care since we are able to tighten the skin on the face, neck, arms and legs.

-When the K-BTE device releases enriched electrons combined with natural acids, including amino acids, this “bio-electricity” stimulates the release of new cells. These new cells are called daughter cells – known as the “Mitosis phase” in cell growth. In addition, the enriched electrons, in this “bio-electricity,” stimulate the growth of new cells, allowing them to split. This is known as the “Mitotic phase”. The result is the rebuilding of the fiber of muscle, bone and cartilage in any physical organ.

The K-BTE device has the capability to cleanse the body of radioactive radiation particles as well as different types of toxic biochemical nerve gas.

The K-BTE device also has the ability of maintaining the bone and muscle tissue of astronauts in space. Currently, Astronauts’ orbits are limited to six (6) months since they suffer from deterioration of bone tissue and show significant muscle atrophy. With that said, there are no circumstances – such as gravitation, vacuum, or any type of energetic field irradiation – that would have any detrimental influence on K-BTE's own energetic field. This would allow for the maintenance of Astronauts’ bone and muscle tissue while in space thus preventing any decline or deterioration.

This enriched-electrons-radiation-emitting-process is absolutely non-radioactive, non-toxic and is, in no way, “shock therapy.”
