**Keywords:** SMF, GMP, Regulatory requirements

#### **ABSTRACT**

The current article aims at consolidation of seven major Regulatory requirements of different countries into one Site Master File. This is being done to get all the information in this article for use in Pharmaceutical Manufacturing Industry as a ready reference. Similar sections of selected regulatory guidelines have to be under one general requirement. Sections which are special to certain Regulatory Authorities have to available in additional information. This study helps in avoiding repetition of similar guidelines that are common to major regulatory authorities. The site Master file consists of General information of Manufacturing practices of Pharmaceutical industry, Additional information with respect to different Regulatory Guidelines.

#### INTRODUCTION

Good Manufacturing Practices (GMP) guidelines are not prescriptive instructions on how to manufacture products. They are the sequence of general principles that must be observed during manufacturing. When a company is setting up its quality program and manufacturing process, there may be many ways it can fulfil GMP requirements. It is the company's responsibility to determine the most effective quality standards. Regulations for manufacturing pharmaceutical products is very stringent, so it is necessary to understand the similarities and differences among GMP requirements for the manufacturing of pharmaceutical products & general requirement which are used in manufacturing by the Regulated countries which will be beneficial to the pharmaceutical companies of both ROW countries & Regulated countries [1].

"GMP is that part of quality assurance which ensures that products are consistently produced and controlled to the quality standards appropriate to their intended use and as required by marketing authorization".

GMP guidelines represent minimal standards that are necessary condition for marketing authorization. Drugs are considered to be adulterated if GMPs are not met. GMP standards are, however, only guidelines and alternative processes and control mechanisms can be used under the condition that equivalent assurance is attained.

GMP guidelines typically comprise strong recommendations on quality management, personnel, production facilities and equipment, documentation and records, production and in-process controls, packaging and identification labelling, storage and distribution, laboratory controls, validation, complaints and recalls, and contract manufacturers.

Compliance with GMP is necessary condition for marketing authorization. In other words, domestic and foreign producers of pharmaceutical companies cannot sell or market their drugs without it. While GMP compliance has not been universally adopted in the developing world, governments in less developed countries are under pressure to comply with GMP requirements when granting marketing authorizations to domestic companies and the west has developed a variety of strategies to ensure that developing countries adopt the rules. GMP requirements require major investment in upgrading manufacturing facilities and this has implications for local

producers. An interesting empirical question is the impact of these changes on local markets and access to and affordability of medicines in developing countries.

The Site Master File (SMF) is prepared by the manufacturer containing specific and factual GMP information about the production and/or control of pharmaceutical manufacturing operations carried out at the named site. If only part of a pharmaceutical operation is carried out on the site, a SMF need only describe those operations eg. Analysis, packaging etc. These guidance notes have been prepared for the manufacturers to prepare the SMF which can suffice the requirement of planning and auditing the facilities by the regulatory bodies.

#### Objective:

- 1. Objective of this article is to outline the notes on preparation of site master file by comparing the guide given in Schedule M, WHO GMP, USFDA, MHRA, PICS and TGA.
- 2. Based on the above comparative notes, model of site master file shall be prepared with basic details of any pharmaceutical industry.

All the above mentioned guidance documents shall be reviewed for the guidelines to prepare SMF, Comparative study shall be conducted for guidelines. In the comparative study of guides to prepare SMF for different sections required in the SMF shall be outlined.

- 1) As per Schedule M Drugs and Cosmetics ACT India.
- 2) European Commission: Health and Consumers Directorate general.
- 3) US-FDA: Unites States, Food and Drug Administration.
- 4) The Drug Manufacturer's Guide to Site Master Files.
- 5) Medicines and Healthcare products regulatory Agency (MHRA).
- 6) Pharmaceutical inspection convention (PIC)/Pharmaceutical inspection co-operation scheme.
- 7) Therapeutic goods and Administration.
- 8) World Health Organisation.

# Comparative study of GMP guideline of regulated countries:

#### **SUMMARY**

From the above comparative analysis of selected GMP Guidelines, we infer that the following points have to be considered for preparation of one site master file as a common platform.

All the selected guidelines briefed about the preparation of site master file with required sections and the sections given slightly varies from one guideline to another guideline. Similar sections of all the selected guidelines are General information on the manufacturer, personnel, premises and equipment, documentation, Production, Quality control, Complaints and products recall, self-inspection. European commission, USFDA and PICS/ TGA details about Quality management system of the manufacturer are under different heading. However, schedule M, MHRA and WHO guidelines give the detail of quality management system of the manufacturer under general information section. Therapeutic goods and Administration- Australia follows the procedure of PIC/PICS (Pharmaceutical inspection convention (PIC)/Pharmaceutical inspection co-operation scheme) Guideline. Details about contract manufacture and analysis are explained by MHRA and WHO whereas same is given under loan license manufacture and license in schedule M. Sanitation is given under separate headings in schedule M and WHO, remaining selected guidelines give the information of sanitation under premises and equipment section. Schedule M is given to mention the details about export of drugs.
