Phytochemicals Evaluation of Aragwadha Patra W.S.R. to Utility in Skin Disorders

Abstract

Introduction: Aragwadha (Cassia fistula) is a medicinal plant used in the Indian system of Medicines. In Ayurveda Charaka and Sushruta described Aragwada in the use of the treatment of different skin diseases (Kusta). The phytochemicals current in the leaf of Cassia fistula possesses Anti-fungal, Antibacterial, and Antiulcer activity.

Materials & Methods: Classical texts, Articles published on Aragwada Patra from available database.

Result and Discussion: Pharmacological actions of Aragwadha Patra.

Conclusion: Aragwadha has several medicinal values for the treatments in several types of skin diseases, fever, and abdominal disorders. It has anti-inflammatory, anti-bacterial, anti-fungal, and anti-tumor activity.
INTRODUCTION-

Aragwada is one drug mentioned in all systems of medicines. It is commonly known as golden shower, Indian labor num, Rajvruksha. In Ayurveda, different parts of Aragwada are used in several conditions. Aacharya’s explained several methods of usage according to indications like lepa, udavartana, Kwatha. Aargwada patra has indicated in Vrana shotha, Granthi shotha, Vata rakta, Amavata, Sandhivata, Kandu, Jwaraa, Hridrogaa, Raktapittaa, Shoolaa, Kustha, Gulma, Vrana, Kachchhua etc. Aacharya’s have also classified Aragvadha under various groups.

Acharya Charaka organized Aragvadha in the group of Kushtaghna, Kandughna, Phalini Varga, Tikta Skanda, Virechana dravya, etc. Acharaya Susruta Arag vadadi Gana, Syamadi Gana, Adhobhagahara, and Acharaya Vagbhatta have been mentioned only in Aragvadadi gana.

AIMS AND OBJECTIVES:

MATERIALS AND METHODS:

b-Acharya kaidev described the importance of leaf of arag vadha for the drying of Kapha and Meda. Leave is also beneficial for the purgation of Mala and Dosha.

Source of Collections have been done from published articles from available databases.

1-A study conducted by Chauhan.P1 et. al, entitled “phyto-pharmaceutical properties of different parts of Aragwada. The author explains Ayurvedic concepts, Microscopic and Macroscopic morphology. The author stated that leaves extract of cassia fistula with acetone diethyl ether and methanol shows antifungal activity against Candida albicans. Leaves extractions of cassia fistula have been taken using the solvents like chloroform, ethanol, methanol, petroleum ether, and water. Extraction by these solvents showed antibacterial activity against E.coli, K.aerogens, and P.aerogense bacteria. Among these extractions, maximum activity was to find out in the ethanolic solvent. According to these findings, the leaf extracts have broad-spectrum activity and may be treated in several infectious diseases.
The author concluded Cassia fistula is a potential plant and a rich source of tannins, flavonoids, and glycosides. It has therapeutic potential in diseases like skin disorders and has antibacterial, antifungal, and wound healing properties.

2- A study conducted by Pavan Kumar et.al, entitled “Medicinal properties of Aragvadha (Cassia fistula Linn.)” and described the medicinal properties of a different part of Aragvadha and explored the pharmacological potential of the drug.

The author says that Anthraquinone derivatives, tannins, free rhein, rhein glycosides, Sennoside-A, and Sennoside-B are present in leaves of cassia fistula. Cassia fistula is used in the management of infected dermal wounds without using synthetic antibiotics. The presence of anthraquinone in Cassia fistula may have the best action in skin disorders. Leaves of Cassia fistula have Antibacterial activity against S aureus, S albus, S flexure, S Typhi A, and B.

The author Concluded that the drug Cassia fistula has several medicinal properties like antibacterial, antifungal, and skin disorders.

3- A study conducted by Dr. Manish Sharma et.al, entitled “An Overview of Botanicals and Therapeutic Aspects of Aragvadha(Cassia Fistula Linn).” The author explains chemical constituents present in a different part of the Cassia fistula plant. Aragvadha leaves contain anthraquinone, tannins, Senosides A and B, Rhein, and its glucosides.

In general, the leaf paste of cassia fistula useful for itching and several skin disorders.

The leaves contain flavonoids that might be work as antimicrobial activities.

The author concluded that the leaf of Cassia fistula has several phytochemicals for various therapeutic actions. Therapeutical actions like antibacterial, wound healing, anti-itching, anti-parasitic.3- A study conducted by Dr. Manish Sharma et.al3, entitled “An Overview of Botanicals and Therapeutic Aspects of Aragvadha (Cassia fistula Linn).” The author explains chemical constituents present in a different part of the Cassia fistula plant. Aragvadha leaves contain anthraquinone, tannins, Senosides A and B, Rhein, and its glucosides.

In general, the leaves paste of cassia fistula is used for itching and several skin disorders.

The leaves contain flavonoids that might be work as antimicrobial activities.
The author concluded that the leaves of Cassia fistula have several phytochemicals responsible for various therapeutic actions. These actions like antibacterial, wound healing, anti-itching, anti-parasitic.

4-A study conducted by Tewari Ramesh Chandra et.al, entitled “Phytochemistry and Pharmacological Activities of Aragwadha.” The author has explained the vernacular name, botanical description, classical references, distributions, macroscopic features, identification, substitute, chemical composition, pharmacological activities, medicinal uses, etc. The aqueous extract of leaves identified two sennoside A and sennoside B. The chemical composition of the Leaf has free rhein, rhein glycosides, and rich in tannins.

Pharmacological Action - 90% ethanolic extract of leaves showed antioxidant property next to the stem bark. The ethanolic leave extract of cassia fistula showed antiulcer activity against pylorus ligation-induced gastric ulcer.

**DISCUSSION**

There are four articles found on pharmacological actions of the leaf of Cassia fistula. Two research articles explained the pharmacological properties of different media used for the extraction of Cassia fistula leaf. The author in the first article explained various solvents for the extraction method and studied their pharmacological actions. Acetone diethyl ether and methanol extraction of Cassia fistula leaf show antifungal activity against Candida albicans. The author explained four different solvents for the extraction of Cassia fistula leaves like chloroform, ethanol, methanol, petroleum ether, and water. All these solvents extraction showed antibacterial activity against *E.coli*, *K.aerogens*, *Protiou vulgaris*, and *P.aerogense* bacteria. Ethanolic extraction showed maximum antibacterial activity. The author of the second and third articles explained phytochemicals and their action on the body. The fourth article concluded that 90% Ethanolic extraction of Cassia fistula leaf has Antioxidant and possesses anti-ulcer properties.

In classics, Acharya’s explained Dadru as one of the types of Kustha that can be co-related with Fungal skin disorders. Acharya Sushrutra has mentioned lepa (paste) as the treatment of kushtha, as it is a type of sadhana (purification). Lepa pacifies provoked sthanika dosha by
local application. Aragvadha patra has kushthagna (anti kushtha), kandughna (anti-itching), kriminashaka (antimicrobial), and rakta shodhaka(blood purifier) properties as a result of it act on several types of kushtha by its Rasa- Panchak. Argavada possesses Madhura Rasa, Guru, Mridu & Snighdha guna, Sheeta virya, Madhura vipaka, and Rochana karma. Ayurveda explains the chemical structure by the name of rasa and vipaka, whereas pharmacological actions by guna and veerya of a drug.

Kushtha is a tridoshajanya vyadhi that cannot be manifest with a single dosha involvement. The sapta dravyas of kushtha are tridoshas, twaka, rakta, mamsa, and Ambu. According to Acharya Charaka, nidaan sevan influence prakopa of tridosha and vitiated doshas will get ashraya in Twaka, Rakta, Mansa, and Ambu create the kushta roga.

Aragvadha is tridosha shamaka and pacifies prakopita tridoshas and maintains Samata.

Aragvadha possesses shita veerya, Rakta shodhaka, and helps to resolve rakta dusti with which Kushta subsides. Aacharya’s mentioned kandughna, kushtaghna, which directly shows the role of Aaragvadha in Kushta.

The abreast leaf of Cassia fistula possesses anti-bacterial, anti-fungal properties, anti-itching properties, wound healing, and anti-inflammatory activities.

Aragwadha is a rich source of tannins, flavonoids, glycosides, linoleic, oleic, stearic acid. Leaf of cassia fistula mainly contains oxalic acids, tannins, oxy- anthraquinones, anthraquinones derivatives.

Anti-bacterial and anti-Fungal activities help against pathogen-causing skin disorders. Anti-itching, anti-inflammatory activities help to reduce symptoms and pathogenesis. Wound healing property refers to a living organism’s replacement of destroyed and damaged tissue by newly produced tissue.

**CONCLUSION:**

Many research studies concluded that Aragwadha (Cassia fistula) is responsible for various therapeutical actions like antibacterials, antifungal, wound healing, anti-ulcer, and anti-itching properties.

*Citation: Rajeshwari V. Kamat et al. Ijpr.Human, 2021; Vol. 21 (3): 469-475.*
Leaves extraction of cassia fistula is more effective for itching, oozing, pain, burning, and cracking of the skins.
